Subject: Microsoft Settlement

Hearing the news about AOL via Netscape suing Microsoft has called my attention to the harassment against Microsoft we have seen the last few years.

It is my understanding that the antitrust case against Microsoft is currently in the review phase and that comments about whether the settlement is in the public interest are being sought.

Please DO NOT ALLOW this latest "terrorist" tactic to influence your decision to quietly settle the case against Microsoft leaving it intact to continue to provide excellent products for us consumers.

There was a time when I also tended to be a Microsoft Basher, and of course installed and used the Netscape Browser. Then as part of my job I was exposed to Microsoft IE and to my amazement and excitement found it to be a much better product. Needless to say, I rushed home that night and installed Microsoft IE on my personal computer.

No gun to my head. The best product always wins !!!!! That is what free enterprise is all about.
